

SMS Render QA Checklist

Printable post-deployment verification checklist

Generated: 09 Apr 2026 12:11

A. Deployment Health

- Open the Render live URL.
- Confirm the landing page loads.
- Confirm CSS and layout load correctly.
- Confirm there is no 502, 500, or blank screen.
- Open Render logs and confirm startup completed.
- Confirm there are no recurring database connection errors.
- Confirm there are no static files manifest errors.
- Confirm there are no websocket startup errors.

B. Login

- Open /login/.
- Confirm the login page is styled correctly.
- Confirm SMS and Store Management System appear correctly.
- Log in with a valid account.
- Log in with an invalid password.
- Confirm invalid login shows a clean error.
- Refresh the login page and try again.
- Confirm there is no CSRF failure page.

C. Staff Role

- Log in as staff.
- Confirm staff dashboard opens.

- Confirm sidebar shows Dashboard, Request History, Requests.
- Confirm restricted storekeeper pages are blocked.
- Open /requests/.
- Confirm KPI cards are visible.
- Click Draft, Submitted, Fulfilled, and Locked KPI cards.
- Confirm clicked KPI glows and scales.
- Confirm workspace summary results change with the selected KPI.
- Confirm recent activity is visible.
- Confirm request history nav item opens the request history table page.
- Confirm request history KPI filters work.
- Confirm selected KPI glows and scales there too.

D. Staff Request Flow

- Create a new request.
- Add one item.
- Save as draft.
- Re-open and edit the draft.
- Add multiple items.
- Submit the request.
- Confirm submitted request appears in request history.
- Confirm submitted request cannot be edited like a draft anymore.
- Confirm fulfilled request becomes read-only after storekeeper action.

E. Storekeeper Role

- Log in as storekeeper.
- Confirm storekeeper dashboard opens.
- Confirm sidebar shows inventory, issuance history, stock-in history, requests, stock-in.

- Open /requests/.
- Confirm incoming requests queue loads.
- Click Pending Requests, Editable Fulfilled, Fulfilled Today, and Total Fulfilled.
- Confirm selected KPI glows and scales.
- Confirm results below match the selected KPI.

F. Fulfillment Flow

- Open a submitted request from queue.
- Confirm it goes to the fulfill page, not generic edit page.
- Confirm In Stock is visible on the fulfill page.
- Confirm request details are correct.
- Fulfill the request.
- Confirm success redirect works.
- Confirm success message appears.
- Confirm request disappears from pending queue.
- Confirm it appears in issuance history.

G. Fulfillment Edit Flow

- Open an editable fulfilled request.
- Increase quantity within allowed original requested cap.
- Reduce quantity.
- Try increasing beyond allowed cap.
- Confirm validation blocks invalid increase.
- Confirm save succeeds for valid changes.
- Confirm redirect goes back to request page.
- Confirm recent activity says item was increased or reduced.
- Confirm issuance history status shows Edited.

H. Inventory

- Open inventory as storekeeper.
- Search for an item.
- Filter All, Low, and Out.
- Confirm results change correctly.
- Confirm inventory decreases after fulfillment.
- Confirm inventory increases after stock-in.
- Confirm non-authorized users cannot access store inventory page.

I. Stock-In

- Open stock-in page.
- Confirm no stray symbols or empty top-right circles.
- Add one item.
- Add multiple rows.
- Increase and decrease stock-in quantity.
- Remove a row.
- Add optional comment.
- Upload optional document if used.
- Save stock-in.
- Confirm success.
- Confirm inventory updated.
- Confirm stock-in history recorded it.

J. Issuance History

- Open issuance history as storekeeper.
- Open issuance history as management.

- Filter by Today, Locked, and Edited.
- Confirm selected KPI glows and scales.
- Confirm requester column appears correctly.
- Confirm edited rows show Edited.
- Confirm quantities and items are correct.

K. Stock-In History

- Open stock-in history.
- Confirm records appear.
- Confirm quantities, comments, dates, and users are correct.
- Confirm latest stock-in appears without manual refresh if live update is active.

L. Management Role

- Log in as management.
- Confirm management dashboard opens.
- Confirm management can access history and report pages.
- Confirm management cannot use storekeeper-only action pages if that is intended.
- Open weekly report.
- Confirm item breakdown appears first.
- Confirm department summary appears next.
- Confirm totals are correct.
- Export Excel.
- Open exported file.
- Confirm title is SMS WEEKLY REPORT.
- Confirm report period and generated date are clearly visible.
- Confirm serial numbers are centered.
- Confirm total issued columns are centered.

- Confirm department summary sheet is present.

M. Live Update / WebSocket

- Open one staff page in browser tab 1.
- Open one storekeeper page in browser tab 2.
- Submit a request from staff.
- Confirm storekeeper request queue updates without refresh.
- Fulfill request from storekeeper.
- Confirm staff request and activity update without refresh.
- Perform stock-in.
- Confirm inventory or history pages update without refresh.
- Edit fulfillment.
- Confirm history and activity update without refresh.

N. Production Safety Checks

- Confirm HTTPS is working.
- Confirm no CSRF host or origin issues.
- Confirm no DisallowedHost error.
- Confirm no 404 on static CSS or JS.
- Confirm no websocket mixed-content errors in browser console.
- Confirm database-backed pages open normally after redeploy.

O. Final Acceptance

- Staff can create and submit requests.
- Storekeeper can fulfill and edit fulfillment.
- Inventory updates correctly.
- History pages reflect actions correctly.

- Excel weekly report exports properly.
- Live updates work.
- No critical production errors in Render logs.
